1. Introduction

SAP stands for Systems, Applications and Products in Data Processing. Five German Engineers founded it in 1972. SAP is an ERP software which large organizations use to manage their business. SAP has several modules, each of which represents a business-process. Modules are usually abbreviated for the business process they represent. For instance, HR is Human Resources, FI for Financial Accounting and SD is Sales & Distribution and so on. All together there are some nineteen modules.

These modules are highly integrated in real-time, which means, that if information is shared between modules then the data is entered only once. This reduces the chances of error arising from repetitive entry and also reduces the man-hours. Managers and decision makers always have information at their fingertips and this helps then in effective decision making.

SAP has been around for over three decades. Nine out of ten Fortune-500 companies have already implemented SAP (not counting the thousands of to-be Fortune-500 companies that have SAP). There are well over 10 million SAP users worldwide and jobs keep popping up all around the world.

SAP is the leading ERP (Enterprise Resource Planning) software. Because of it's liberal open-architecture, there are millions of programmers working around the world to provide interaction between thousands of major software and SAP.

SAP is usually implemented in phases. The first phase is when organizational structure and accounting components are configured, tested and then taken live. Gradually more modules are turned on.

HCM Course

The purpose of this book is to learn step-by-step general configuration methods for the HCM module. The course is built on menu path navigation of the Implementation Guide (IMG) and the application area.

LearnSAP

LearnSAP strives to help students develop SAP skills and knowledge needed to complete in the employment market and adapt to future changes. The training course combines classroom theory of SAP technology with hands-on practice.

LearnSAP strives to evolve with the marketplace, delivering skills-based education that is sensitive to market needs and convenient to students. Our goal is to help people develop into employees who are equipped to meet the challenges of a marketplace where change is the one constant.

2. SAP Logon

SAP Logon

Client = 800

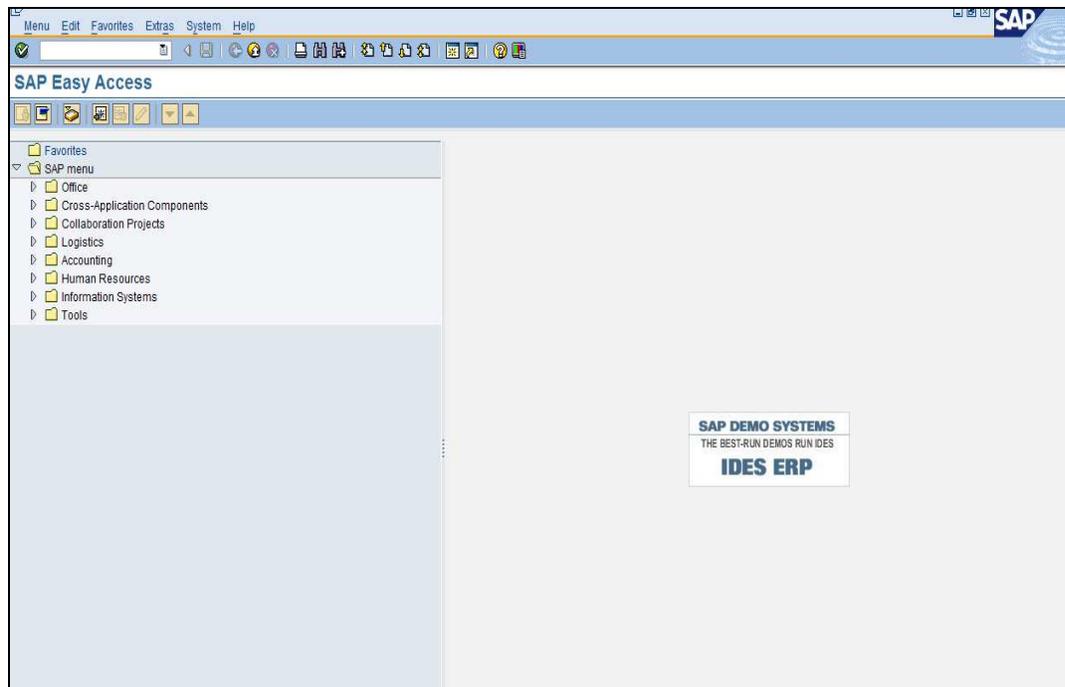

Username = <your user name>

Password = <password>

Click on Enter

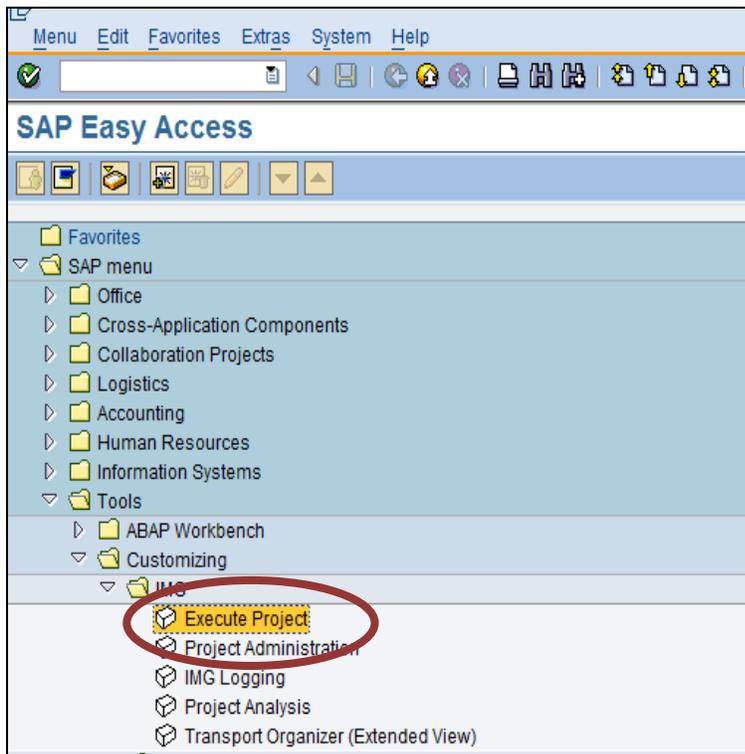

The screenshot shows the SAP Logon dialog box. At the top, there is a menu bar with 'User', 'System', and 'Help'. Below the menu bar is a toolbar with various icons. The main area of the dialog box is titled 'SAP' and contains a 'New password' button. Below this, there are four input fields: 'Client' with the value '800', 'User' with the value 'hrtraining', 'Password' with a masked password represented by asterisks, and 'Language' which is currently empty.

Press enter and you see SAP Easy Access.

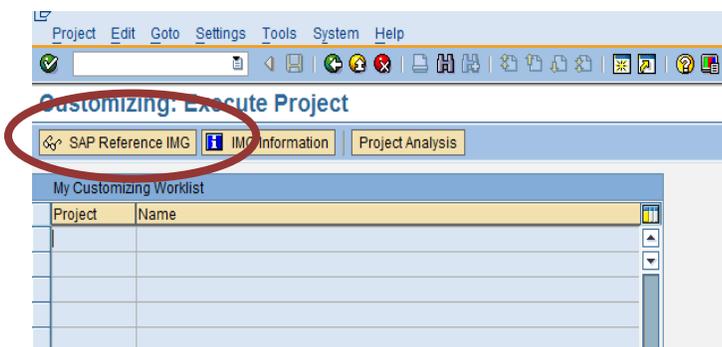

The setting or customizing of SAP is done via the IMG (Implementation Guide). The route to reach the SAP Reference IMG will be as follows:

Menu Path : SAP Main Screen -> Tools -> Customizing -> IMG -> Edit Project

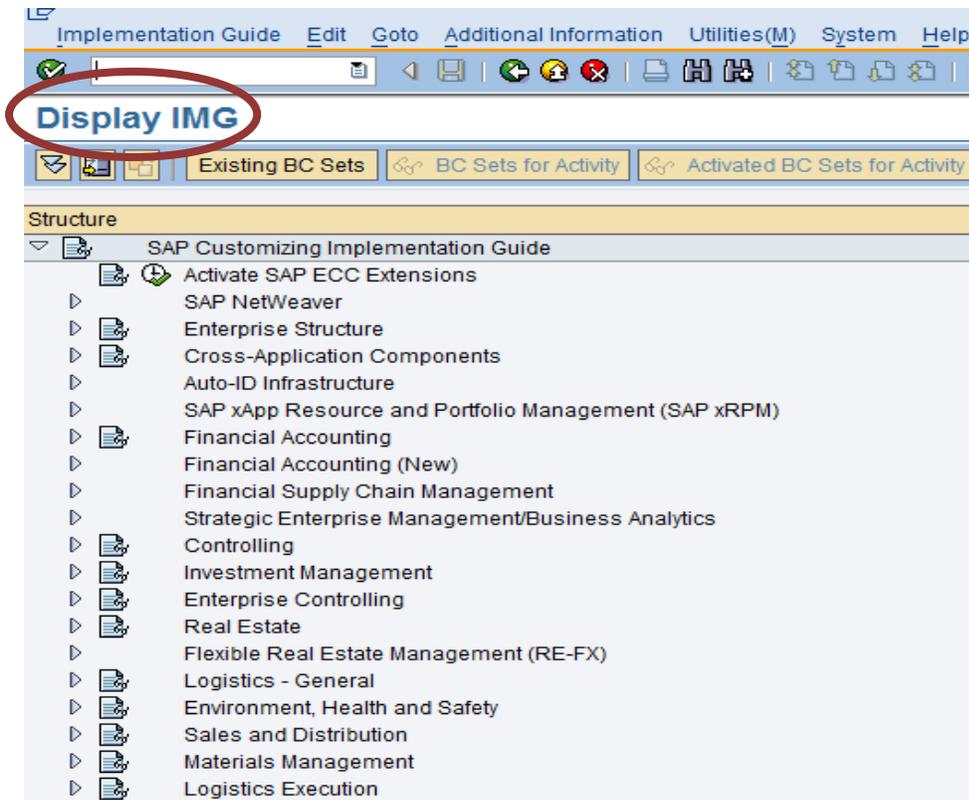

Double click on "Execute Project"

Click on the "SAP Reference IMG" button

You see the IMG Screen

3. Overview of Human Capital Management

SAP HR or SAP Human Resources or SAP HCM or SAP Human Capital Management or SAP HRMS or SAP Human Resources Management System is one of the largest modules in the SAP R/3 system which consists of many sub modules like:

- * Organizational Management
- * Personnel Administration
- * Recruitment
- * Time Management
- * Payroll
- * Compensation Management
- * Personnel Cost Planning
- * Personnel Development
- * Training & Event Management
- * Travel Management
- * Environmental Health & Safety.

Many of these sub modules are further sub divided into many components for e.g. Time Management is further divided into Time Administration, Shift Planning, Incentive Wages, and Time Sheet. There are further sub-division of each sub module in SAP.

A Human Resources Management System enables you to set up organizational hierarchies and employee relationships and then store and administer employee data in the system.

The structures of an enterprise are subdivided into organizational structures, based on an organizational plan, and administrative structures, based on the enterprise and personnel structures.

There are three types of Human Resource structure:

- Enterprise Structure
- Personnel Structure
- Organizational Structure

We assign all three structures in info type 0001(Organization Assignment)

The screenshot shows the SAP 'Change Organizational Assignment' (Info Type 0001) interface. The main data fields are as follows:

Pers. No.	50995	Pers.Assgn	00050995

Supervisor	

Information on the organizational assignment of employees is of great importance for authorization checks, for the entry of additional data, and for Time Management and Payroll Accounting.

Enterprise Structure: Company code, personnel area, and personnel subarea

Personnel Structure: Employee group, employee subgroup, payroll accounting area

Organizational Structure: Organizational units, jobs, and positions

Enterprise Structure

The enterprise structure is the method used for defining how your organization is set up in SAP ERP HCM. Aligning your company correctly to this structure is one of the most important steps of an SAP implementation, because the enterprise structure defined here can have important ramifications on later decisions, not just in Employee Administration but in many other SAP ERP HCM components as well.

The Enterprise Structure for Personnel Administration is made up of the following elements:

An independent legal and organizational unit of the system.

An independent company with its own accounting unit; a company that draws up its own balance sheet.

A specific entity for Personnel Administration; a subdivision of the company code.

Personnel Subarea: A subdivision of the Personnel Area.

Personnel Structure

As opposed to the enterprise structure, which defines the organization from a legal and physical point of view, the personnel structure defines the organization from the employees' point of view.

The Personnel Structure is made up of the following elements:

Used to classify employees into general groups for processing of pay, time, and benefits.

A subdivision of the employee group. This allows further distinguishing of employees according to specific traits.

Organization Structure

An **organizational structure** consists of activities such as task allocation, coordination and supervision, which are directed towards the achievement of organizational aims. It can also be considered as the viewing glass or perspective through which individuals see their organization and its environment

Organizational Management enables you to get a clear picture of your organization in the past, present, and future. Using this information, you can prepare for and react to future HR requirements and changes.

Organizational Structure is divided in two divisions

- Organization Plan
- Administrator

Organization Plan: You create your organizational plan using organizational units and positions. An organizational plan is a comprehensive and dynamic model of the structural and personnel environment in your enterprise, which you can evaluate at any time.

Administrator: You can enter three different administrators: one for personnel administration, one for time management, and one for payroll.

Company and company code are created by FICO consultant.

4. Enterprise Structure:

The Enterprise Structure for Personnel Administration is made up of the following elements:

Company: An independent legal and organizational unit of the system.

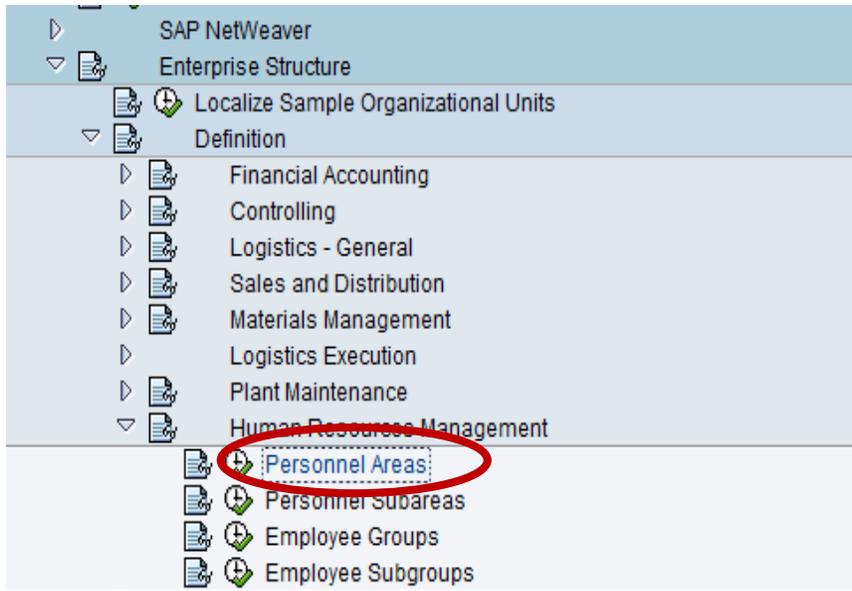

An independent company with its own accounting unit; a company that draws up its own balance sheet.

A specific entity for Personnel Administration; a subdivision of the company code.

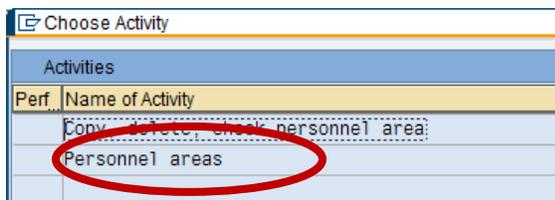

Personnel Subarea: A subdivision of the Personnel Area.

a. Define Personnel Area: A Personnel Area is a specific entity within the Personnel Administration structure. It is a subunit of the organization. Each Personnel Area must be unique and assigned to one company code. Personnel areas are used for reporting purposes, validating authorizations, setting up planned working times, and generating default information in employee master records and pay records.

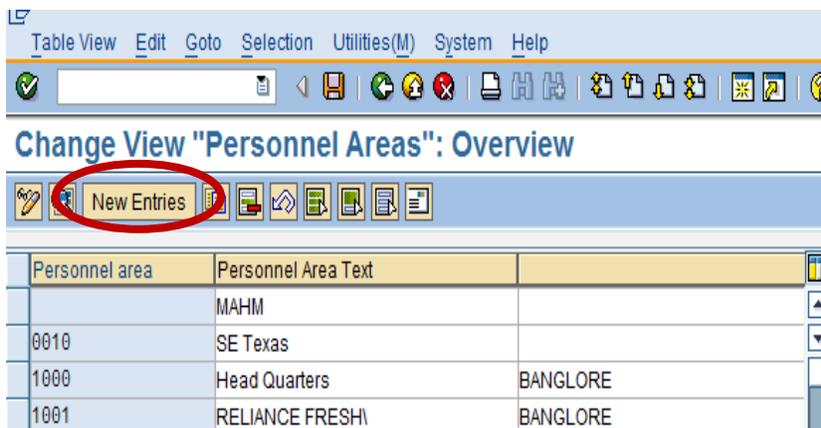

Menu Path: SAP Reference IMG->Enterprise Structure->Definition->Human Resources Management-> Personnel Areas

Double click on "Personnel Areas"

Double click on Personnel areas.

Click on New Entries.

Give 4 character alphanumeric identification to Personnel Area and additional information.

The screenshot shows the 'Edit address: OUSA' form in SAP. It is divided into several sections:

- Name:** Title (Company), Name (Ousa Personnel area).
- Search Terms:** Search term 1/2 (Ousa).
- Street Address:** Street/House number (5101 Camden Lane), Postal Code/City (77584 Pearlland), Country (us), Region (tx).
- PO Box Address:** PO Box (567), Postal Code (77584), Company postal code.
- Communication:** Language (EN English), Telephone, Mobile Phone, Fax, E-Mail, Standard Comm.Method, and Extension fields.
- Comments:** A text area for additional notes.

At the bottom, there are navigation buttons: a green checkmark, a document icon, 'Preview', a magnifying glass icon, 'International Versions', and a red 'X' icon.

Press enter.

The screenshot shows the 'Prompt for Customizing request' dialog box. It contains the following information:

- Request:** ECSK900735
- Short Description:** HR Configuration
- Customizing request:** A dropdown menu.

At the bottom, there are navigation buttons: a green checkmark, a magnifying glass icon, a document icon, 'Own Requests', and a red 'X' icon.

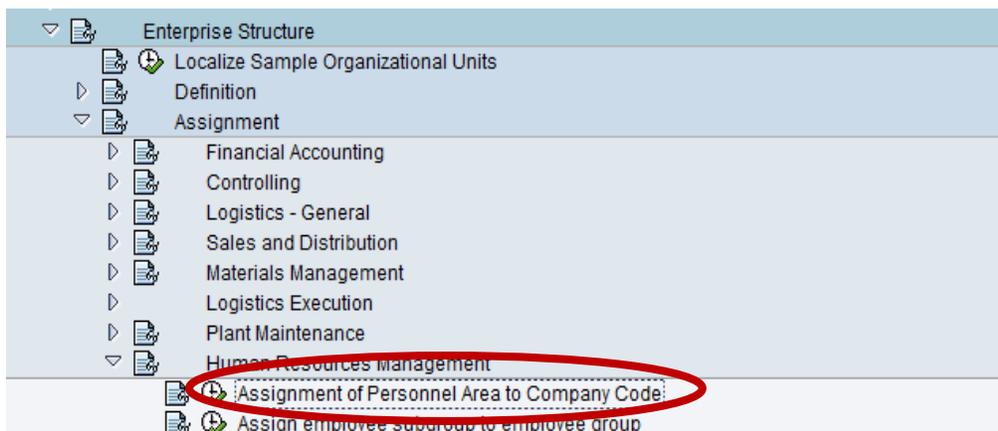

Press enter.

✔ Data was saved

b. Assignment Personnel area to Company Code: You allocate each of your personnel areas to one company code.

When you create a personnel number, the corresponding company code is allocated to it in the info type Organizational allocation (0001), depending on the enterprise structure in which the employee is situated.

SAP Reference IMG->Enterprise Structure->Assignment->Human Resources Management -> Assignment of Personnel area to Company code

Click on execute button.

Press save button.

- c. **Define Personnel Subarea:** A personnel subarea is an organizational unit that represents a specific area of the company organized according to certain aspects of personnel, time management and payroll.

The personnel subarea represents a subdivision of the personnel area. For instance, within each personnel area, the company has a variety of employees. Some are eligible for pay while others are not. Some are eligible for benefits while others are not.

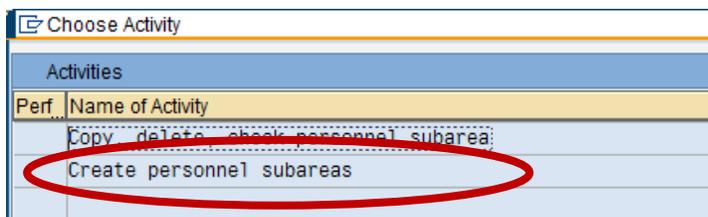

The following business sub tasks belong to the personnel subarea:

- Defining of pay scale and wage type structure
- Defining planned working hours
- Defining appraisal criteria

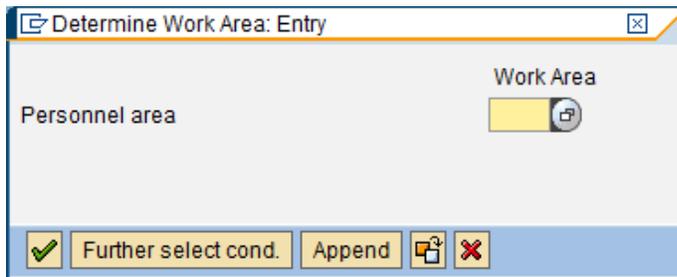

Menu Path: SAP Reference IMG->Enterprise Structure->Definition->Human Resources Management-> Personnel Areas

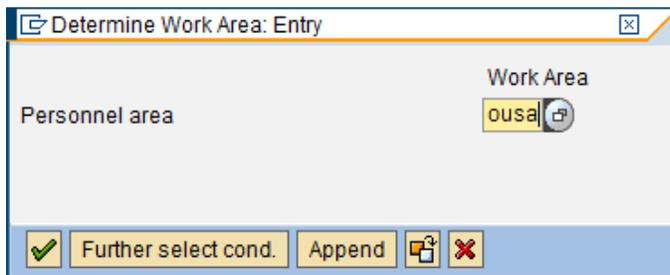

Click on execute button.

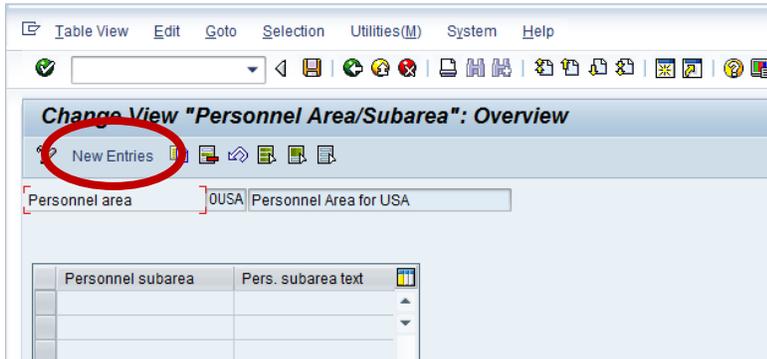

Double click on Create personnel subareas.

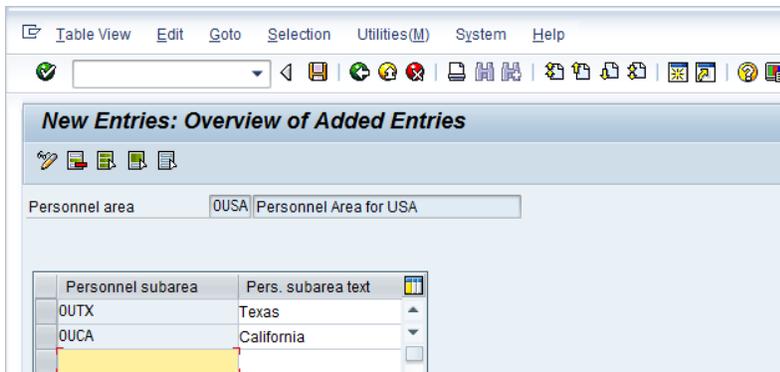

Give your personnel area.

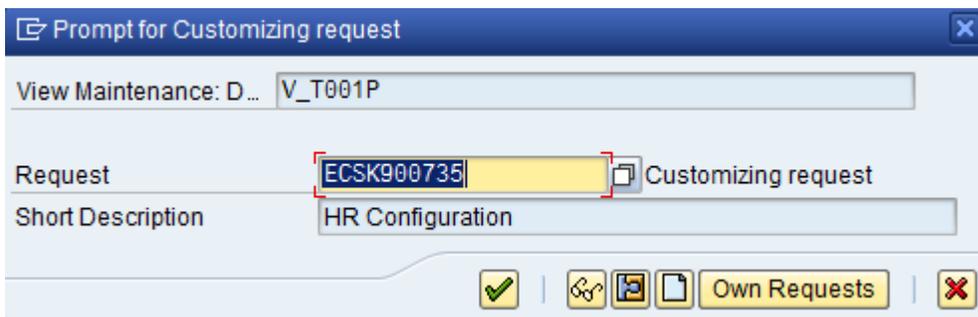

Press enter.

Click on New Entries.

Press save button.

Press enter.

5. Personnel Structure: As opposed to the enterprise structure, which defines the organization from a legal and physical point of view, the personnel structure defines the organization from the employees' point of view.

The Personnel Structure is made up of the following elements:

Employee Group: Used to classify employees into general groups for processing of pay, time, and benefits.

Employee Subgroup: A subdivision of the employee group. This allows further distinguishing of employees according to specific traits.

a. Define Employee Group: The employee group allows you to divide your employees into groups and allows you to define their relationship to the enterprise. The following essential organizational functions can be carried out using the employee group:

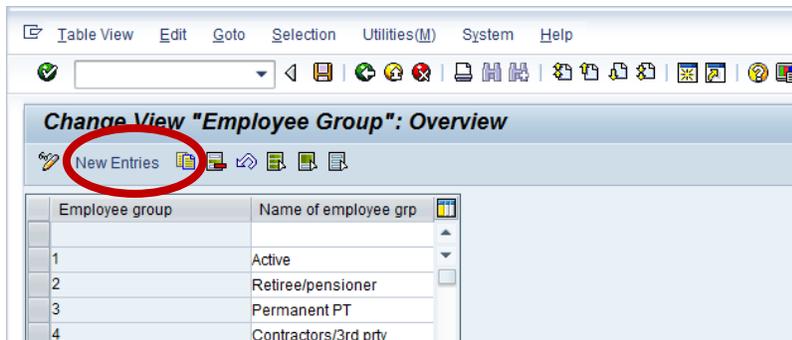

- generating default values when entering data; for example, for the payroll accounting area or for the basic pay of the employee
- generating a selection criterion for evaluations
- generating a unit for the authorization check

Example : You want to distinguish your employees between persons actively employed, pensioners and early retirees.

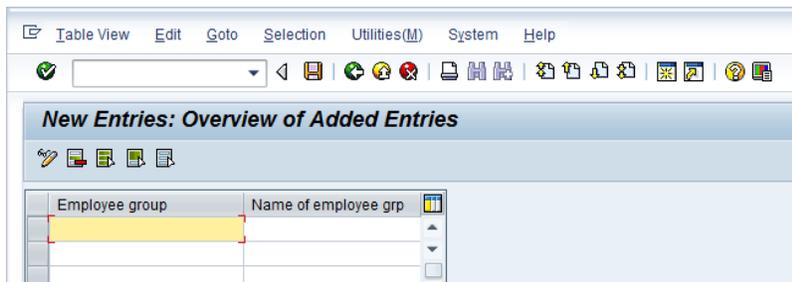

Menu Path: SAP Reference IMG -> Enterprise Structure ->Definition ->Human Resources Management-> Employee Group

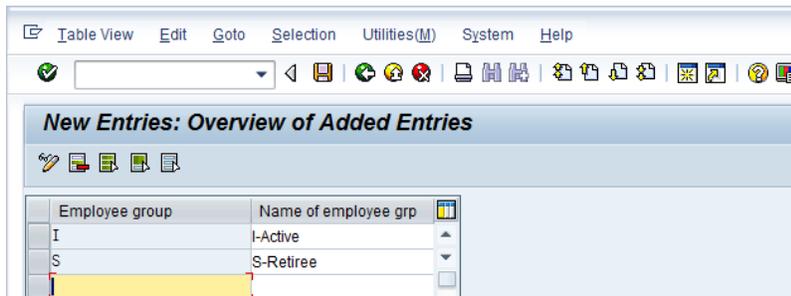

Click on execute button.

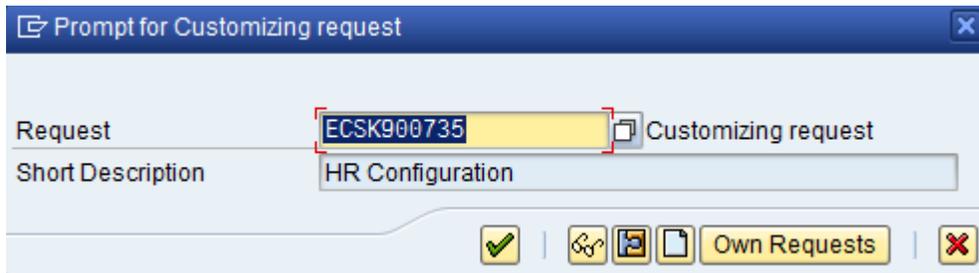

Click on New Entries.

Press save button.

Press enter.

- b. Define Employee Subgroup:** The employee subgroup represents a subdivision of the employee group. When you define employee subgroups, you are essentially begun to set up your personnel structure.

Example: Within the employee group Active, you want to distinguish between industrial workers, pay scale employees, trainees and executive employees. This distinction enables you to do the following:

- You can carry out evaluations for which certain employee subgroups can be included or excluded.
- Certain personnel administrators should only be allowed to edit the data of certain employee subgroups.
- Depending on the employee subgroup, you can generate different default values in master data processing (for example, executive employees have entitlement to more leave than pay scale employees).
